

COMMUNICATION SOLUTIONS PLUG 'N PLAY

IHM's standard stand-alone communication solutions, PLUG 'N PLAY, are designed for organisations that require remote control and cross communication. A high degree of flexibility in function and an easy operation are strong benefits which the offshore and maritime industries as well as other business would gain by acquiring one of the solutions.

Small and medium size administrations or organisations demand mobility and specific functionality in order to manage communication with staff and customers. IHM's PLUG 'N PLAY standard solutions comprise basic communication functionalities, 1 to 4 operator positions and up to 6 radios.

Choosing an IHM PLUG 'N PLAY system ensures:

- Effective communication
- A cost efficient solution
- Easy installation
- Full operational reliability
- Easy operation - one single control panel

Select functionalities that fits your needs

Whatever industry, the IHM PLUG 'N PLAY solutions meet your requirements for communication and

are compliant to rules and regulations within the relevant industries. The PLUG 'N PLAY systems consist of four solutions:

- IHM MICRO
- IHM SAILOR
- IHM OFFSHORE ONSHORE
- IHM FLEXIBLE

IHM MICRO and IHM SAILOR are relevant for minor marinas, locks and bridges with a need for up to 4 base stations or radios, and just one operator position. For IHM SAILOR, only Sailor radios are usable, which also implies an optional DSC feature.

IHM OFFSHORE ONSHORE is especially designed for the offshore industry, where remote control of

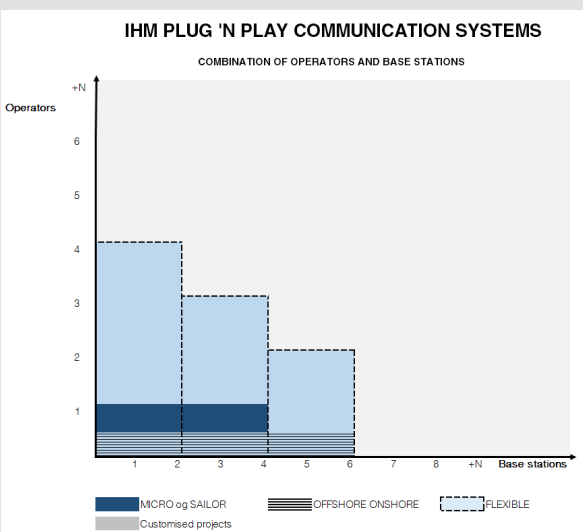

communication on one or several oil rigs would ensure huge financials benefits.

IHM FLEXIBLE entails the highest numbers of radios and operator positions. In addition, the solution also provides most options for integration into a wide range of radio technologies.

Easy to install and easy to use

Despite the high complexity of technology, installation is simple. An embedded start-up program reduces installation time to only entering the types of radios. Hereafter, the system is up and running.
